

DOCUMENT DRAFTING CASE STUDY

Capture and Use Data Your Way

Hall & Wilcox are a leading independent Australian law firm who are also prominent supporters of legal innovation and technology.

Hall & Wilcox reached out to us in 2018 with a specific problem they were facing with document production. They wanted to give one of their major practice groups the ability to capture and store data while creating documents with the purpose of reducing re-entry for future document production, as well as reporting purposes. The solution had to be cost-effective and easy for the users to engage with.

Objective

To provide Hall & Wilcox with an easy to use and cost-effective document drafting system that also allowed them to capture and re-use data.

Solution

After a rigorous selection process we were informed that DocAssist fit the bill.

Hall & Wilcox's Client Solutions team worked with the practice group to map the processes and documents required, as well as identifying the data that needed to be captured.

DocAssist has an easy-to-use interface and operates within the Microsoft Office environment. Its write-back functionality makes it possible to capture and store data when drafting documents. This information can then be re-used to pre-populate other documents, including reports.

Outcome

Within a tight deadline MOSMAR and Hall & Wilcox were able to collaborate on the project to ensure that database structures, integration, documents, developer and user training and implementation were all taken care of within 3 months.

MOSMAR worked closely with the Client Solutions team at Hall & Wilcox to ensure that both users and developers at the firm had adequate handover and the support they needed.

They delivered for their users:

- A central data repository to populate documents and emails
- Minimised data errors
- Significant data entry time saving
- Increased lawyer productivity
